Math 1 Unit 1 EOC Review

Solving Equations (including Literal E	Equations)	
- Get the variablet	o show what it equals to satisfy the equa	tion or inequality
- Steps (each step only where necessary):	:	
1. Distribute		
2. Same Side Combine (like term	as)	
3. Opposite Sides Cancel (a varia	ble)	
4. Solve two-step equation		
Concept Questions:		
1. Why do we use "opposite" operations	to solve an equation?	
2. What does the solution to an equation	represent?	
3. What key words in a word problem ca	n help determine the operations to set up	an equation?
Parts of Expressions		
Coefficient -	Variable	
Constant -	Exponent	
In the expression $5x^3 - 7x^2 + 4$, name the	e: Term(s)	
Coefficient(s) Variable(s) Constant(s)	Exponent(s)

1. What is the difference between how terms are separated in expressions and how factors are separated?

Function Intro

A function is a rule in which each _____ (usually x) yields exactly one _____ (usually y).

Domain - _____ Range - ____

When we evaluate functions, we substitute the _____ variable and evaluate the expression.

Example: Evaluate h(4) for $h(t) = -4.9t^2 + 20t + 3$.

Concept Question: Write a mathematical relation that is NOT a function (has more than one y for an x) and explain.

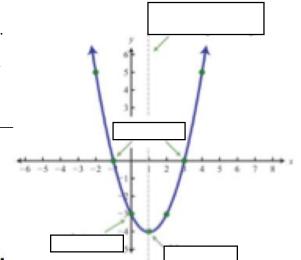

Key Features of Graphs

Intercepts: Points where a graph ______ the x or y axis.

Vertex: ______ or _____

point on a function

Axis of Symmetry: Line that cuts a function _____

A.

- 1. What is the x-value for every y-intercept? What is the y-value for every x-intercept? Why are these the case?
- 2. Does the graph of a line have a vertex? Why or why not?

Math 1 Unit 1 Sample Problems

- 6 Two boys, Shawn and Curtis, went for a walk. Shawn began walking 20 seconds earlier than Curtis.
 - Shawn walked at a speed of 5 feet per second.
 - Curtis walked at a speed of 6 feet per second.

For how many seconds had Shawn been walking at the moment when the two boys had walked exactly the same distance?

- 14 A school purchases boxes of candy bars.
 - Each box contains 50 candy bars.
 - Each box costs \$30.

How much does the school have to charge for each candy bar to make a profit of \$10 per box?

- A \$0.40
- B \$0.50
- C \$0.80
- D \$1.25
- 15 Energy and mass are related by the formula $E = mc^2$.
 - m is the mass of the object.
 - c is the speed of light.

Which equation finds m, given E and c?

- A $m = E c^2$
- B $m = Ec^2$
- $C m = \frac{c^2}{E}$
- $D m = \frac{E}{c^2}$

- John bought 4 pounds of almonds for a total cost of \$22.
- The cost per pound for cashews is 60% more than the cost per pound for almonds.
- John bought enough cashews that, when he mixed them with the almonds, the mixture had a value of \$6.50 per pound.

Approximately what percent of the mixture, by weight, was cashews?

- A 20%
- B 25%
- C 30%
- D 35%
- 30 Collin noticed that various combinations of nickels and dimes could add up to \$0.65.
 - Let x equal the number of nickels.
 - Let y equal the number of dimes.

What is the domain where y is a function of x and the total value is \$0.65?

- A {0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13}
- B {1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13}
- C {0, 1, 3, 5, 7, 9, 11, 13}
- D {1, 3, 5, 7, 9, 11, 13}

Math 1 Unit 2 EOC Review

Linear Equation

$$y = mx + b$$

(x, y) – Points on the line with $x =$	and y =	
m – Slope (or) – constant rate by which dependent variable	or
as the independent variable incre	eases	
b - Y-Intercept - value of the equation who	en	
Concept Questions:		

1. In a linear function f(x) = mx + b, what are the terms, coefficients, variables, and constant?

Slope/Rate of Change

Rate of change $-\frac{Change\ in}{Change\ in}$ for any defined region. Give two points, use the formula

In a line, the rate of change (called _____) is _____.

Concept Questions:

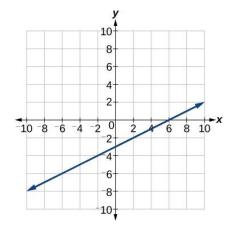

- 1. Why does a line have a constant slope but a parabola does not?
- 2. What are some clues in word problems that would help indicate the slope?

Graphs of Linear Equations

For the graph to the right:

Table of values:

X	-2	-1	0	3	6	9
y			-3		0	

- 1. How can the x-intercept help determine the equation of the line?
- 2. Write a word problem that could be solved using the graph above.

Arithmetic Sequences

Arithmetic Sequence – sequence of numbers that	or	_ by a constant
rate, called the		

Explicit Sequence:
$$a_n = a_1 + (n-1)d$$
 Recursive Sequence: $a_n = a_{n-1} + d$

$$a_n = \underline{\qquad} \qquad a_n = \underline{\qquad} \qquad d = \underline{\qquad}$$

$$a_{n-1} = \underline{\qquad} \qquad a_n = \underline{\qquad} \qquad d = \underline{\qquad}$$

Conceptual Questions:

- 1. Could the function f(x) = 3x + 2 be an arithmetic sequence? What would be a_1 and d?
- 2. Why are arithmetic sequences and linear functions taught in the same unit?

Scatter Plots/Correlation

Calculator Steps for Linear Regression/Plotting Scatter Plots/Getting Line of Best Fit:

- 1. Push STAT-EDIT-enter all (x, y) values into table (X in L₁, Y in L₂)
- 2. To get equation of best-fit line, STAT-CALC-LinReg (#4) _____ is the correlation coefficient
- 3. To graph scatterplot, 2nd STAT PLOT Plot1...On, then choose options

- 1. How can a linear regression (line of best fit) help solve problems?
- 2. If most of the points on a scatterplot are far from the line of best fit, what will the r value be close to? How do you know?

Math 1 Unit 2 Practice Problems

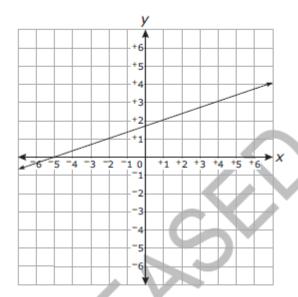

- Suppose that the function f(x) = 2x + 12 represents the cost to rent x movies a month from an internet movie club. Makayla now has \$10. How many more dollars does Makayla need to rent 7 movies next month?
- Dennis compared the *y*-intercept of the graph of the function f(x) = 3x + 5 to the *y*-intercept of the graph of the linear function that includes the points in the table below.

X	g(x)
-7	2
-5	3
-3	4
-1	5

What is the difference when the y-intercept of f(x) is subtracted from the y-intercept of g(x)?

- A -11.0
- B -9.3
- C 0.5
- D 5.5
- Cell phone Company Y charges a \$10 start-up fee plus \$0.10 per minute, x.
 Cell phone Company Z charges \$0.20 per minute, x, with no start-up fee. Which function represents the difference in cost between Company Y and Company Z?
 - A $f(x) = {}^{-}0.10x 10$
 - B f(x) = -0.10x + 10
 - C f(x) = 10x 0.10
 - D f(x) = 10x + 0.10

21 Mario compared the slope of the function graphed below to the slope of the linear function that has an x-intercept of $\frac{4}{3}$ and a y-intercept of $^{-2}$.

What is the slope of the function with the smaller slope?

- A $\frac{1}{5}$
- B $\frac{1}{3}$
- C 3
- D 5
- The boiling point of water, T (measured in degrees), at altitude a (measured in feet) is modeled by the function T(a) = -0.0018a + 212. In terms of altitude and temperature, which statement describes the meaning of the slope?
 - A The boiling point increases by 18 degrees as the altitude increases by 1,000 feet.
 - B The boiling point increases by 1.8 degrees as the altitude increases by 1,000 feet.
 - C The boiling point decreases by 18 degrees as the altitude increases by 1,000 feet.
 - D The boiling point decreases by 1.8 degrees as the altitude increases by 1,000 feet.

Minutes	25	50	75	100	125
Distance Traveled (in miles)	20	40	60	80	100

What is the meaning of the slope of the linear model for the data?

- A The car travels 5 miles every minute.
- B The car travels 4 miles every minute.
- C The car travels 4 miles every 5 minutes.
- D The car travels 5 miles every 4 minutes.
- 29 Lucy and Barbara began saving money the same week. The table below shows the models for the amount of money Lucy and Barbara had saved after *x* weeks.

Lucy's Savings	f(x) = 10x + 5
Barbara's Savings	g(x) = 7.5x + 25

After how many weeks will Lucy and Barbara have the same amount of money saved?

- A 1.1 weeks
- B 1.7 weeks
- C 8 weeks
- D 12 weeks

31 The table below shows the cost of a pizza based on the number of toppings.

Number of Toppings (n)	Cost (C)
1	\$12
2	\$13.50
3	\$15
4	\$16.50

Which function represents the cost of a pizza with n toppings?

A
$$C(n) = 12 + 1.5(n - 1)$$

B
$$C(n) = 1.5n + 12$$

$$C \qquad C(n) = 12 + n$$

$$D \qquad C(n) = 12n$$

There were originally 4 trees in an orchard. Each year the owner planted the same number of trees. In the 29th year, there were 178 trees in the orchard. Which function, t(n), can be used to determine the number of trees in the orchard in any year, n?

A
$$t(n) = \frac{178}{29}n + 4$$

B
$$t(n) = \frac{178}{29}n - 4$$

$$C t(n) = 6n + 4$$

D
$$t(n) = 29n - 4$$

35 The sequence below shows the total number of days Francisco had used his gym membership at the end of weeks 1, 2, 3, and 4.

Assuming the pattern continued, which function could be used to find the total number of days Francisco had used his gym membership at the end of week *n*?

A
$$f(n) = n + 5$$

$$B \qquad f(n) = 5n - 1$$

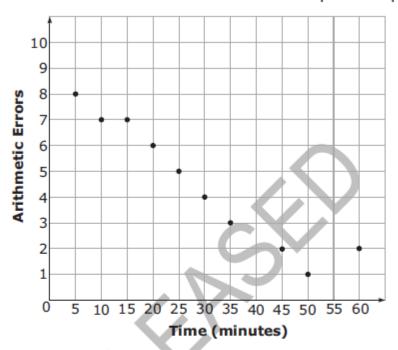

$$C f(n) = 5n + 4$$

$$D f(n) = n^2$$

37 The table below shows the shoe size and age of 7 boys.

Name	Shoe Size	Age (y)
Tyrone	6	9
Marcel	6	11
Patrick	7	15
Bobby	8	11
Dylan	9	15
Mike	10	16
Jonathan	12	17

Approximately what percent of the boys' ages is more than 1 year different from the age predicted by the line of best fit for the data?

Which describes the relationship between the number of arithmetic errors the students made and the amount of time the students took to complete the quiz?

- A There is a strong positive relationship between the variables.
- B There is a strong negative relationship between the variables.
- C There is a weak positive relationship between the variables.
- D There is a weak negative relationship between the variables.

Math 1 Unit 3 EOC Review

Midpoint and Distance Formulas

$$= \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} = (\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2})$$

Concept Questions:

- 1. How is the distance formula the same as the Pythagorean Theorem?
- 2. Why do we divide by 2 to compute the midpoint?

Parallel and Perpendicular Slopes

Parallel lines	intersect, have	slope		
Perpendicular lines – Intersect at	·	, have		slopes
(For a perpendicular line,	flip the	, flip the)	

Concept Question:

1. If a triangle has two sides with opposite reciprocal slopes, what kind of triangle is it? How do you know?

Graphing Inequalities

To graph inequalities, first graph the ______ that represents the bound for the inequality. If the inequality is < or >, use a _____ line. If the inequality is \le or \ge , use a _____ line. Then, shade _____ if y > or \ge the expression, shade _____ if y < or \le the expression. Concept Question:

- 1. How many solutions are there for an inequality? Why?
- 2. To solve a system of two inequalities by graphing, how can you tell which region represents the solution?

Solving Systems of Equations

System of Equations -		ations with the same	
Nysiem of Eduations -	ean	lamons with the same	
Jybicin of Equations	244	addions with the same	

Methods to solve:

Graphing	Substitution	Elimination
- Graph both equations	- Solve one equation for a variable	- Multiply one or both equations if
- The solution to the system is the		necessary to get or
	the expression	terms
of the two	for the variable in the other	
graphs.	equation	- Add or subtract the two
		equations (Same terms,
	- Solve the equation for the first	Opposite terms)
	variable, then	
	again to solve for the second	- Solve the "answer" equation for
	variable	the first variable, then
		to solve for the second variable

Systems that are parallel lines have _____ solutions, while systems with the same line have _____ solutions.

Examples:
$$y = -2x + 8$$

$$y = x - 1$$

$$7x + 6y = -9$$

$$y = -2x + 1$$

$$2x + 4y = 36$$

$$3x - 4y = -6$$

Concept Question:

1. When is it easiest to solve a system by graphing, substitution, or elimination? Why?

Geometric Shapes Review

Quadrilateral: Polygon with _____ sides

Parallelogram: Quadrilateral with opposite sides ______ AND ____

Rectangle: Quadrilateral with four ______ opposite sides _____ and _____

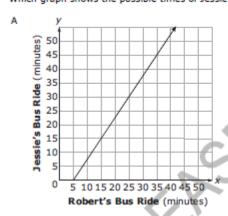

Square: Quadrilateral with all sides ______, opposite sides ______, and all _____ angles

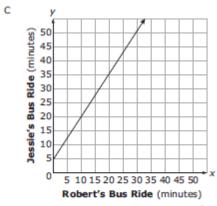

Rhombus: Quadrilateral with all sides _____ and opposite sides _____

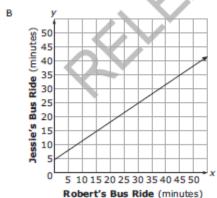

Trapezoid: Quadrilateral with one pair of ______ sides

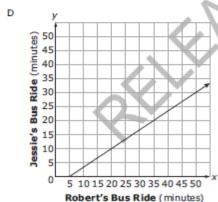

Math 1 Unit 3 Practice Problems

Jessie's bus ride to school is 5 minutes more than ²/₃ the time of Robert's bus ride. Which graph shows the possible times of Jessie's and Robert's bus rides?

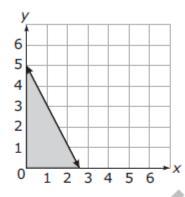

2 What scenario could be modeled by the graph below?

- A The number of pounds of apples, *y*, minus two times the number of pounds of oranges, *x*, is at most 5.
- B The number of pounds of apples, y, minus half the number of pounds of oranges, x, is at most 5.
- C The number of pounds of apples, y, plus two times the number of pounds of oranges, x, is at most 5.
- D The number of pounds of apples, y, plus half the number of pounds of oranges, x, is at most 5.

- 7 The math club sells candy bars and drinks during football games.
 - 60 candy bars and 110 drinks will sell for \$265.
 - 120 candy bars and 90 drinks will sell for \$270.

How much does each candy bar sell for?

(Note: Express the answer in dollars.cents.)

- Two times Antonio's age plus three times Sarah's age equals 34. Sarah's age is also five times Antonio's age. How old is Sarah?
- A line segment has endpoints J(2, 4) and L(6, 8). The point K is the midpoint of \overline{JL} . What is an equation of a line perpendicular to \overline{JL} and passing through K?

A
$$y = -x + 10$$

B
$$y = {}^{-}X - 10$$

$$C y = x + 2$$

$$D y = x - 2$$

- A triangle has vertices at (1, 3), (2, -3), and (-1, -1). What is the *approximate* perimeter of the triangle?
 - A 10
 - B 14
 - C 15
 - D 16
- 33 The vertices of quadrilateral *EFGH* are $E(^-7, 3)$, $F(^-4, 6)$, $G(5, ^-3)$, and $H(2, ^-6)$. What kind of quadrilateral is *EFGH*?
 - A trapezoid
 - B square
 - C rectangle that is not a square
 - D rhombus that is not a square

34 R is the midpoint of segment PS. Q is the midpoint of segment RS.

P is located at (8, 10), and S is located at (12, $^-6$). What are the coordinates of Q?

- A (4, 2)
- B (2, ⁻8)
- C (11, ⁻2)
- D (10, 2)

Math 1 Unit 4 EOC Review

Exponential Function Form

 $y = ab^x$ (Growth or Decay)

When the rate is given as a percent, convert it to a decimal and write as ______ for growth and _____ for decay.

Concept questions:

- 1. Why do we use $1 \pm r$ for the b value when r is given as a percent?
- 2. Why is the rate of change for an exponential function NOT constant as it is for a linear function?
- 3. Which increases faster exponential functions or linear functions? Why?

Rewriting Exponents

Exponent Rules: $x^a \cdot x^b = \underline{\qquad \qquad \qquad } \frac{x^a}{x^b} = \underline{\qquad \qquad } (x^a)^b = \underline{\qquad \qquad }$

$$\frac{x^a}{x^b} = \underline{\hspace{1cm}}$$

$$(x^a)^b =$$

$$x^{-a} =$$

$$\mathbf{x}^{-\mathbf{a}} = \underline{\qquad \qquad \sqrt{\mathbf{x}^a} = \underline{\qquad }$$

- 1. Why does the power rule $(x^a)^b = x^{ab}$ apply for exponents with common bases?
- 2. Why does taking the square root of an exponent divide the exponent by 2?

Geometric Sequences

Geometric Sequence – sequence of numbers that ______ by the same number to compute the next

term. The number multiplied is called the

Explicit Sequence: $a_n = a_1(r)^{n-1}$

Recursive Sequence: $a_n = ra_{n-1}$

 $n = \underline{\hspace{1cm}} a_1 = \underline{\hspace{1cm}} a_n = \underline{\hspace{1cm}} r = \underline{\hspace{1cm}}$

$$a_n = \underline{\hspace{1cm}} r = \underline{\hspace{1cm}}$$

 $a_{n-1} =$ _____

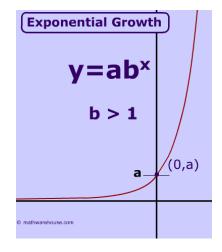

Conceptual Questions:

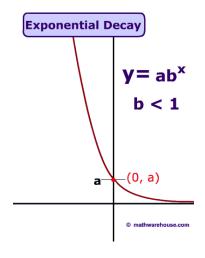

- 1. Could the function $f(x) = 3(2)^x$ be an arithmetic sequence? What would be a_1 and r?
- 2. Why are geometric sequences and exponential functions taught in the same unit?

Exponential Graphs

Exponential functions are ______, with the parent function either increasing _____

or decreasing to the .

- 1. Why is the a value the y-intercept of the parent function for exponential functions?
- 2. Why does a *b* value between 0 and 1 decrease?
- 3. Why does an exponential parent function not have negative values?

Math 1 Unit 4 Practice Problems

- 13 Katie and Jennifer are playing a game.
 - Katie and Jennifer each started with 100 points.
 - At the end of each turn, Katie's points doubled.
 - At the end of each turn, Jennifer's points increased by 200.

At the start of which turn will Katie first have more points than Jennifer?

17 The table below shows the average weight of a type of plankton after several weeks.

Time	Weight
(weeks)	(ounces)
8 4	0.04
9	0.07
10	0.14
11	0.25
12	0.49

What is the average rate of change in weight of the plankton from week 8 to week 12?

- A 0.0265 ounce per week
- B 0.0375 ounce per week
- C 0.055 ounce per week
- D 0.1125 ounce per week
- 20 Monica did an experiment to compare two methods of warming an object. The results are shown in the table below.

Time (Hours)	Method 1 Temperature (°F)	Method 2 Temperature (°F)
0	0	1.5
1	5	3
2	11	6
3	15	12
4	19	24
5	25	48

Which statement **best** describes her results?

- A The temperature using both methods changed at a constant rate.
- B The temperature using both methods changed exponentially.
- C The temperature using Method 2 changed at a constant rate.
- D The temperature using Method 2 changed exponentially.

Math 1 Unit 5 EOC Review

Polynomial Operations

Multiplying: ______ terms times EVERY other term

To distribute ______, write the polynomial in parentheses and ______.

Adding or subtracting:

Remember, you can NOT operate with in the calculator!

Example 1: $(2x - 3)^2$

Concept Questions:

1. What is the difference between 2x + 2x and 2x(2x)?

2. Write two polynomials that you can NOT multiply using the "FOIL" trick, and explain why not.

Factoring

$$x^2 + bx + c$$

$$ax^2 + bx + c$$

$$x^2 + bx + c$$
 $ax^2 + bx + c$ Perfect Squares

$$10x^2 - 5x$$

$$10x^2 - 5x$$
 $x^2 - 9x - 22$

$$3x^2 - 13x - 10$$
 $x^2 - 49$ $5x^3 + 500x$

$$x^2 - 49$$

$$5x^3 + 500x$$

Concept Questions:

1. Why is $a^2 - b^2$ NOT the same as $(a - b)^2$?

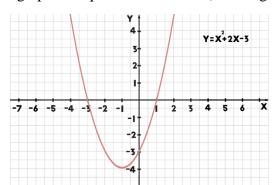

2. Why can we NOT just find two numbers that add to b and multiply to c to factor a trinomial with a > 1?

Quadratic Graphs

The shape of the graph of a quadratic function (with degree, or ______, of 2) is a _____.

 $f(x) = ax^2 + bx + c$

 $f(x) = x^2 + 2x - 3$

Concept Questions:

- 1. Why is the y-intercept equal to the c value?
- 2. Why are the x-intercepts the same as the solutions equal to 0?

Solving by Factoring

To solve a quadratic by factoring, set the expression equal to 0, factor, and ______. You will get ______ solutions when solving a quadratic equation.

If both solutions are the same, the solution is a ______, and the ______ is on the x-axis. Example: $x^2 - 5x = 14$

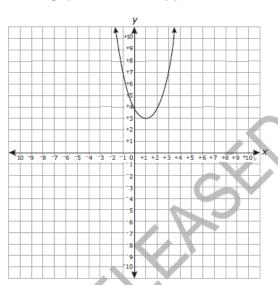

Concept Questions:

1. Why is it necessary to set the quadratic equal to 0 before solving?

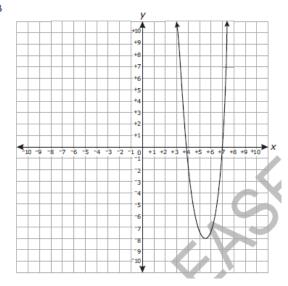

Math 1 Unit 5 Practice Problems

- 3 Which expression is equivalent to $t^2 36$?
 - A (t-6)(t-6)
 - B (t+6)(t-6)
 - C (t-12)(t-3)
 - D (t-12)(t+3)
- 4 Which is the graph of the function $f(x) = 4x^2 8x + 7$?

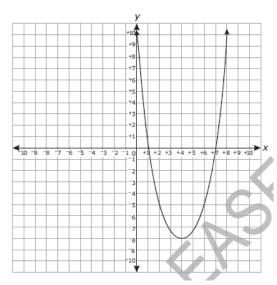

Α

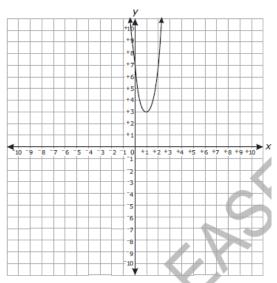

В

C

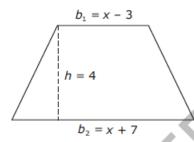

D

- The floor of a rectangular cage has a length 4 feet greater than its width, w. James will increase both dimensions of the floor by 2 feet. Which equation represents the new area, N, of the floor of the cage?
 - $A \qquad N = w^2 + 4w$
 - B $N = w^2 + 6w$
 - $N = w^2 + 6w + 8$
 - D $N = w^2 + 8w + 12$

- The function $f(t) = {}^{-}5t^2 + 20t + 60$ models the approximate height of an object t seconds after it is launched. How many seconds does it take the object to hit the ground?
- 12 The larger leg of a right triangle is 3 cm longer than its smaller leg. The hypotenuse is 6 cm longer than the smaller leg. How many centimeters long is the smaller leg?
- Suppose that the equation $V = 20.8x^2 458.3x + 3,500$ represents the value of a car from 1964 to 2002. What year did the car have the least value? (x = 0 in 1964)
 - A 1965
 - B 1970
 - C 1975
 - D 1980
- The area of a trapezoid is found using the formula $A = \frac{1}{2}h(b_1 + b_2)$, where A is the area, h is the height, and b_1 and b_2 are the lengths of the bases.

What is the area of the above trapezoid?

A
$$A = 4x + 2$$

B
$$A = 4x + 8$$

C
$$A = 2x^2 + 4x - 21$$

D
$$A = 2x^2 + 8x - 42$$

Math 1 Unit 6 EOC Review

Representations of Data Very large quantities of data can be seen much easier using a ______ or _____ than a We can create these using our calculators to easily interpret the data. are preferable for showing actual values within the data. _____ are preferable for showing the spread of the data. Concept question: 1. Why are dot plots not preferable for a survey of an entire high school with 2000 students? Measures of Central Tendency (Mean, Median, IQ Range, SD) Median - _____ Interquartile Range -Standard Deviation - _____ **Concept Question:** 1. Explain the potential relationship between the IOR and standard deviation for a box plot with very short whiskers and long boxes. **Outlier Effects** Outlier -An outlier generally has a larger effect on the _____ and ____ of a data set than the _____ and _____.

1. Why does an outlier not greatly affect a median, but it can have a great effect on a mean?

Math 1 Unit 6 Practice Problems

25 The table below shows the area of several states.

State	Area (thousands of square miles)
Connecticut	6
Georgia	59
Maryland	12
Massachusetts	11
New Hampshire	9
New York	54
North Carolina	54
Pennsylvania	46

Delaware has an area of 2,000 square miles. Which is true if Delaware is included in the data set?

- A The mean increases.
- B The range decreases.
- C The interquartile range decreases.
- D The standard deviation increases.

36 The number of points scored by a basketball player in the first eight games of a season are shown below.

What would happen to the data distribution if she scored 24, 22, 27, and 28 points in her next four games?

- A The data distribution would become less peaked and more widely spread.
- B The data distribution would become less peaked and less widely spread.
- C The data distribution would become more peaked and less widely spread.
- D The data distribution would become more peaked and more widely spread.
